

## Canola seed hybrid performance comparison.

InVigor® hybrid canola from BASF continues to lead yield rankings in field trials across the country. With consistently strong yield potential and exciting new traits to help improve harvestability, InVigor hybrid canola gives you the confidence to grow more.

### InVigor L345PC

InVigor L345PC was the highest-yielding hybrid in our 2021 and 2022 Demonstration Strip Trials. You can enhance the standability of InVigor L345PC by avoiding short rotations, fields with high volunteer canola populations, high levels of fertility or under irrigation.

	<b>Yield</b>	<b>111.9%</b> of the checks (InVigor 5440 and Pioneer® 45H29) in 2017 & 2018 WCC/RRC <sup>1</sup> trials <b>111.4%</b> of InVigor L233P (n=28 trials, 2018)
	<b>Traits</b>	Patented Pod Shatter Reduction technology First-generation clubroot resistance <sup>2</sup>
	<b>Growing Zones</b>	All growing areas in the U.S. spring canola market
	<b>Standability</b>	Good
	<b>Maturity</b>	3 1/2 days later than InVigor L233P
	<b>Blackleg</b>	R – Blackleg resistant

**Please note:** Maturity and standability are based on performance ratings and data compiled from several InVigor internal trials over multiple years. Results may vary on your farm due to environmental factors and preferred management practices.

n=number of balanced trials.

<sup>1</sup> Western Canadian Canola/Rapeseed Recommending Committee.

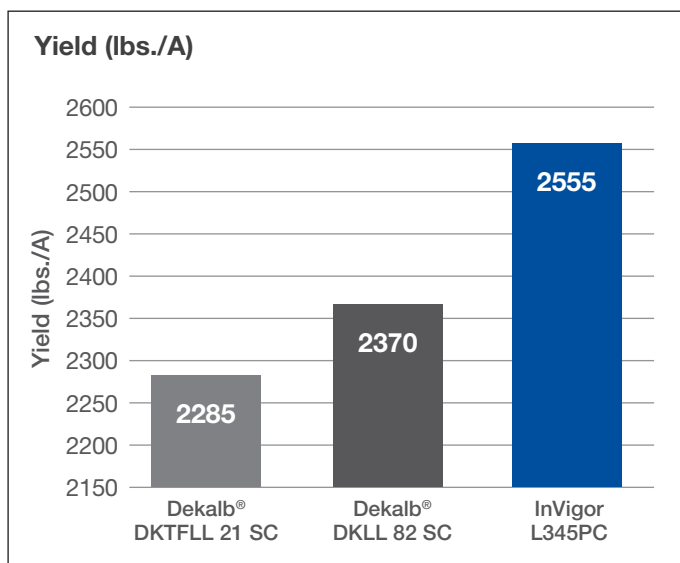

<sup>2</sup> To predominant clubroot pathotypes found in Canada at the time of registration. InVigor L350PC, InVigor Choice LR354PC, InVigor L340PC, InVigor Choice LR344PC and InVigor L345PC share the same first-generation clubroot resistance profile. InVigor L343PC has this resistance profile plus it contains second-generation multigenic clubroot resistance to additional clubroot pathotypes to help combat evolving clubroot pathotypes.

## 2020 BASF InVigor Demonstration Strip Trial Results.

BASF conducts large plot replicated canola trials across the spring canola growing area in the U.S. These are unique trials in that they are conducted with grower cooperators and are replicated large plot trials.

InVigor L345PC averaged a 12% yield advantage over Dekalb® DKTFL 21SC and an 8% yield advantage over Dekalb® DKLL 82SC over 9 large plot trials conducted in North Dakota.

 Results November 3, 2020.

### Protect your investment with outstanding weed control.

InVigor hybrids are bred with the LibertyLink® trait for built-in tolerance to Liberty® herbicide. This fast-acting control allows growers to rotate non-selective herbicide systems and effectively manage tough-to-control weeds.
